

AHCAUDIO Bowls come in many finishes, base metals, and sizes. Each one is custom made by hand.

The stainless mirror finish bowls can be polished with SImichrome or Flitz.

The mild steel bowls have a two part acrylic finish and can be wiped clean with a damp cloth.

Bowls are made using either MIG or TIG welding. They're made from washers. In the case of polished bowls, the polishing takes several hours, through increasingly fine grits. The mild steel bowls are ground smooth, and then coated with a two part acrylic semi-gloss clear coat finish. This finish is extremely durable.

Custom bowls are available, with custom finishes, and custom base metals.
