

The AHCAUDIO IN1DRT24 and IN1DRT12 are true nixie date/time clocks. There are four buttons on the back, the leftmost one turns the tubes on and off, the center of the remaining three selects the setting to be changed, and the ones on either side of the selection button move the selected number up and down. Requires a 12V center positive 5.5x2.5 1.5A power supply.

The clock uses IN-1 nixie tubes made in the late eighties/early nineties in former Soviet block countries. These came from Ukraine.

As lighting devices, these do not have an unlimited lifespan. In addition, these tubes were made at the end of Soviet manufacturing, and the quality is inconsistent at best. Some of these units have been in continual use for 3 years with no appreciable dimming, but they won't last forever, much like incandescent light bulbs, but with a much longer service life.

As long as replacement tubes are available, you can email me at jake@ahcaudio.com for replacement tube service.
