

The AHCAUDIO INS1 is a neon indicator clock available in multiple finishes. The clock has two buttons on the underside that advance the hours and minutes respectively. The clock can be hung on a wall, or on the included stand.

Requires a 12V center positive 5.5x2.5 1.5A power supply.

The clock uses neon indicator tubes made in the late 80s early 90s in former Soviet block countries. These came from Ukraine.

As lighting devices, these do not have an unlimited lifespan. Flickering is normal, and will occur. This flickering will increase gradually over time. In addition, these tubes were made at the end of Soviet manufacturing, and the quality is inconsistent at best.

Replacement of these tubes is not practical.
